

The CLEAN Choice!

The Pure Water Technology® 3i is the CLEAN choice for your workplace. We ensure that the interface components of our products help provide protection against cross-contamination between users.

CleanContact™: Anti-Microbial Protection

CleanContact™ technology infuses the touchpad and surrounding surfaces with an organic anti-microbial ingredient which protects against cross-contamination of germs in your workplace. Here's how it works:

- An organic anti-microbial ingredient (LIFE BC-00-IA) is added to the plastic resin during the manufacturing stage.
- CleanContact anti-microbials have a disruptive effect on the membrane of the bacteria cell, inhibiting the growth of micro-organisms.
- All surfaces protected with CleanContact anti-microbial technology will provide a line of defense for cross-contamination, effective for the life of the product.
- CleanContact technology is designed to resist UV degradation, abrasion, washings and various chemicals.
- Tests prove that a reduction in bacteria of **98% or more** can be observed on CleanContact surfaces compared to surfaces that are not treated at all. This includes the protection against a wide range of microbes including Escherichia coli (E. coli), Staphylococcus aureus (Oro staphira) and more.

Pure Touch Dispense: Designed to Protect

Our point-of-use water systems are intentionally designed to prevent cross-contamination of germs near the dispense nozzle from where all water flows.

- Typical water coolers often have awkward dispense heights, making it difficult for the user to fill a cup or bottle precisely. Pure Water Technology® water systems are designed with the optimum dispense height for ease of use and accurate dispensing.
- The dispense area has a curved and open design to provide a large space for the user to fill a small cup or a large sports bottle without touching the dispense nozzle.

Dispense Area Light: Spill-free Dispense

Pure Water Technology® water systems have a LED light which illuminates the dispense area to easily identify the drip tray "bullseye" for precise dispensing — yet another line of defense we provide to keep your workplace clean and healthy.

PHSI is a U.S. based manufacturer of water purification coolers. The PHSI's factory is a state of the art ISO 9001 and 14001 facility. Our pure water systems are tested and certified to the highest North American and European standards for safety and performance including NSF/ANSI 42, 53 & 58, EnergyStar, UL, CE, and WQA Gold Seal.
